## AUTOMATION

Reduce documentation burden while maintaining the highest standards of care.

### Quality Focus

Automation alone does not provide a compass to needed care. It must use a **VALIDATED** predictive assessment tool.

HDS Automation ensures the highest degree of accuracy and fidelity to scientific standards and proactively addresses the expanded falls with injury metrics set to take effect in 2026.

### Time Savings

HD Nursing leverages your EHR to automate the scoring process for every patient, every shift, every day.

Automation saves **UP TO 60 HOURS** per bed, per year which improves workflow efficiency.

Gives nurses more time to focus on what matters most: direct patient care.

### Accuracy

Enhances scoring accuracy which can lead to fewer fall events.

Upwards of 25% of falls occur because a patient's risk profile was not scored correctly.
